

NANO BRASS S

Brass sand collector cleaning filter

Mini Cleaning Filters - Sand collector cleaning filter with brass head, ring nut and vessel. Stainless steel cartridge. It cleans as it is equipped with a drain valve that removes the sand without having to take apart the filter.

Ideal also for using with hot water (90°C).

Wherever it is necessary for the water to be free from very small solid substances, and especially sand, and allows installation in limited spaces. Untreated water enters the filter, flows through the cartridge, and comes out filtered. The brass vessel can be used with hot water and for special applications (e.g. high pressure, oil filtration).

The "S" version is equipped with a standard 100 micron cartridge, ideal for protecting sanitary circuits. High filtration upon request.
